

SCI-OCR Formula and Table Fixture

A compact one-page fixture with text, a table, and three displayed formula lines. Use it for quick local smoke checks.

Metric	Run 1	Run 2	Delta
Accuracy	0.82	0.91	+0.09
Latency	145 ms	132 ms	-13 ms
Tokens	512	768	+256

Formula block

$$\mathcal{L}(\theta) = -\sum_i y_i \log p_i$$

$$F_1 = \frac{2PR}{P+R}$$

$$x_{t+1} = x_t - \alpha \nabla f(x_t)$$

The final paragraph gives OCR workers a normal prose region after structured content, which is useful when checking reading order.
